

UNUMS INCIDENT PREVENTION TOOL

Sniper is part of the problem management arsenal! It provides self service for workarounds defined by problem management. These workarounds are implemented as temporary fixes to allow the business process to proceed with minimal interruption to service. Sniper temporary fixes are released when repetitive incident of the same data fix are identified.

### **EFFICIENCY**

Faster turnaround of business processes, a bonus during Q4

#### **AUDITS**

Automated auditing complying with SOX and in-house audit requirements

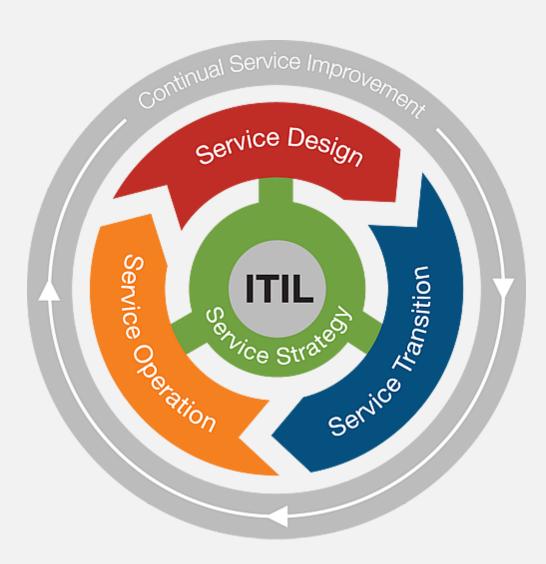

## **AGILE DEVELOPMENT**

Sniper is built in an Agile manner, reacting quickly to changes or requests

#### **METRICS**

**Sniper usage dashboard drives** prioritization of permanent fixes

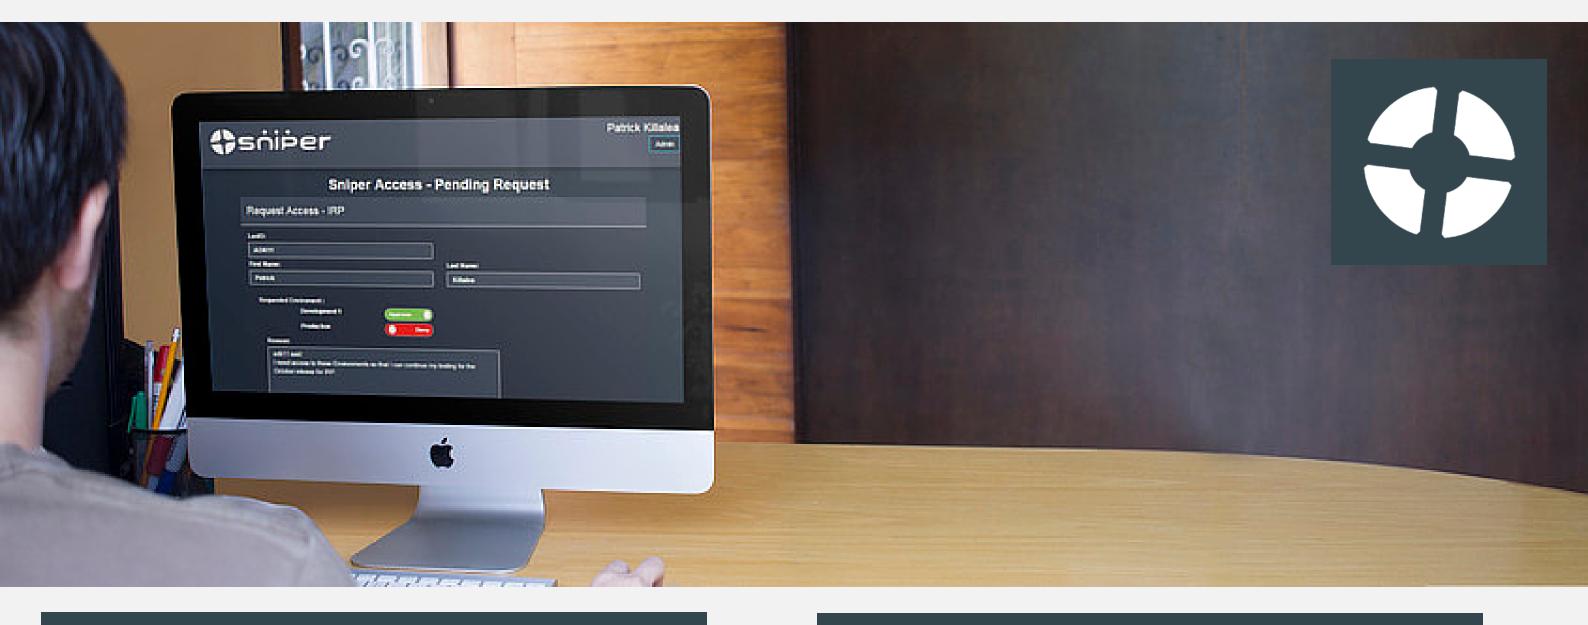

#### ITIL SERVICE MANAGEMENT

Sniper is used to provide Problem Management support in Unums ITIL Environment. Respond faster to challenges which impact your customers. Lower Incident creation by using our Self Service interface. Prioritize application fixes based on customer pain points. Empower your Incident management team by giving them the tools they need.

#### **SERVICE NOW INTEGRATION**

Sniper is integrated with Service Now, Unums new Service tool. Fixes in Sniper link back to Service Now Problem tickets and the Problem Dashboard. Service now retrieves metrics from our audit process, giving management the ability to easily keep track of which fixes are being used the most

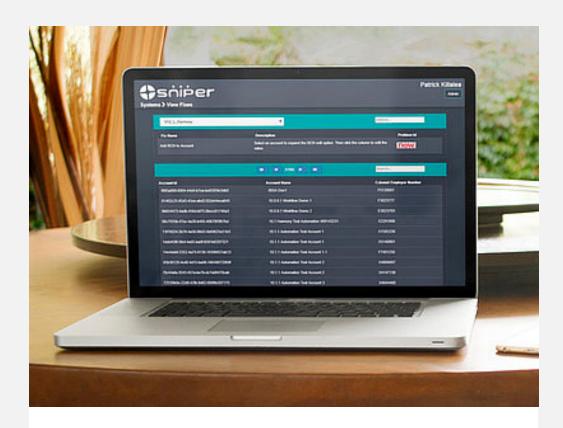

#### PROBLEM MANAGEMENT

Use Sniper to drive prioritization of data fixes within your application.

Provides Self Service work around while permanent fix is evaluated.

Use metrics gained from Sniper to drive application development teams to avoid further incidents.
